

Keyboard Shortcuts

The CommandHandler implements the following command bindings for keyboard input in `doKeyDown`:

- `Ctrl-X` & `Shift-Del` invoke `cutSelection`
- `Ctrl-C` & `Ctrl-Insert` invoke `copySelection`
- `Ctrl-V` & `Shift-Insert` invoke `pasteSelection`
- `Del` & `Backspace` invoke `deleteSelection`
- `Ctrl-A` invokes `selectAll`
- `Ctrl-Z` & `Alt-Backspace` invoke `undo`
- `Ctrl-Y` & `Alt-Shift-Backspace` invoke `redo`
- `Up` & `Down` & `Left` & `Right` (arrow keys) call `Diagram.scroll`
- `PageUp` & `PageDown` call `Diagram.scroll`
- `Home` & `End` call `Diagram.scroll`
- `Space` invokes `scrollToPart`
- `Ctrl--` & `Keypad--` (minus) invoke `decreaseZoom`
- `Ctrl++` & `Keypad++` (plus) invoke `increaseZoom`
- `Ctrl-0` invokes `resetZoom`
- `Shift-Z` invokes `zoomToFit`; repeat to return to the original scale and position
- `Ctrl-G` invokes `groupSelection`
- `Ctrl-Shift-G` invokes `ungroupSelection`
- `F2` invokes `editTextBlock`
- `Menu Key` invokes `showContextMenu`
- `Esc` invokes `stopCommand`

On a Macintosh the Command key is used as the modifier instead of the Control key.

On touch devices there is a default context menu that shows many commonly-used commands when you hold a finger down on the diagram.
